Strongly increasing sales, driven by the growing adoption of FEV's in the Netherlands and Germany and the increasing number of Fastned charging stations, combined with stable network operation costs is leading to steadily improving operational performance. Also, as planned, Fastned is heavily investing in expansion of its network through site acquisition and development of the pipeline of prospect sites. During 2019, Fastned passed operational EBITDA break-even, but due to network expansion costs and exceptional expenses reported a net loss of €12,034k.

Included in the 2019 results are a number of exceptional expenses: (i) Fastned incurred an accounting loss on the construction of stations, as part of a service concession of €116k, which is regarded as exceptional. (ii) Other expenses relate to a loss on defective solar panels (€264k) which were removed, without at year-end having any definitive resolution on replacement under warranty. The removal costs for the defective solar panels caused an additional exceptional loss of €76k within selling and distribution expenses, (iii) Administrative expenses include costs for staff share option plans of €1,583k that arose when the first two milestones of the 2018 option plan were reached, and cost for options issued under the 2015 option plan, (iv) Within other operating expenses, legal, listing and advisory costs (€1,037k) related to the change of listing location of Fastned depository receipts to Euronext.

As of the date of this Supplement, there has been a significant change in the financial performance and the financial position of Fastned since 31 December 2019. Due to Covid-19 related lockdown measures, Fastned experienced a decline in revenues of around 70% in the weeks just after strict COVID-19 related lockdown measures came into effect in the Netherlands. In May, this decline was around 50%, and showing further improvement in the running month of June.

To accommodate this loss in revenue, Fastned has delayed parts of planned capital expenditures to be able to maintain an (increased) minimum cash buffer well into 2021, based on current projections. This has had a negative impact on the implementation of the growth strategy, delaying the construction of new stations in multiple countries.

The accountant Deloitte has indicated as per 30 March 2020 that Fastned shows adequate funds to continue as a going concern. The accountant Deloitte has indicated as per 30 March that there is an "Emphasis of matter related to the financial position including impact of Corona virus disease 2019 (COVID-19)", stating: "We draw attention to the going concern paragraph in note 1 of the financial statements in which management disclosed its assessment of the entity's ability to continue as a going concern. COVID-19 also impacts Fastned. Management disclosed the current impact and its plans to deal with these circumstances in notes 1 and 25 of the financial statements, to which we also draw attention. Our opinion is not modified in respect of these matters."

2.3 What are the key risks that are specific to the Issuer?

Any decision to invest in the Bonds should be based on consideration of this Prospectus (including the Supplement) as a whole by the investor. In purchasing Bonds, investors assume the risk that the Issuer may become insolvent or otherwise be unable to make all payments due in respect of the Bonds.

There is a wide range of factors which individually or together could result in the Issuer becoming unable to make all payments due. It is not possible to identify all such factors or to determine which factors are most likely to occur, as the Issuer may not be aware of all relevant factors and certain factors which it currently deems not to be material may become material as a result of the occurrence of events outside the Issuer's control. The Issuer has identified the following factors which could materially adversely affect its business, results of operations and prospects, thereby potentially negatively impacting the ability to make payments due.

Risks related to Fastned's industry:

- Fastned's growth depends on the growth of the number of full electric Vehicles (FEVs) on the road. A slower than anticipated increase, or even a decrease, in the growth of FEVs may therefore slow down Fastned's growth and have a material adverse effect on Fastned's business, results of operations and prospects.
- Alternative charging behaviour may lead to less customers and therewith could have a material adverse effect on Fastned's business, results of operations and prospects.

- Fastned operates in a market that could become increasingly competitive. This could result in lower margins or in a loss of market share and may thus have a material adverse effect on Fastned's business, results of operations and prospects.
- Fastned's growth may not be sustainable, as the demand for fast charging stations depends on the continuation of certain trends and stagnation of these trends may have a material adverse effect on Fastned's business, results of operations and prospects.
- Constantly evolving technology could render Fastned's business less competitive and may have an impact on the competitiveness of the Fastned network and may thus have a material adverse effect on Fastned's business, results of operations and prospects.

Risks related to Fastned's business:

- Fastned may be unable to successfully execute its growth strategy in existing markets and expanding into additional markets such as Belgium, Switzerland and France which could have a material adverse effect on Fastned's business, results of operations and prospects.
- Disruption of back and front office software systems may lead to errors in the payment of the delivered electricity and has a negative influence on the turnover which could have a material adverse effect on Fastned's results of operations, financial condition and prospects.

Risks related to the regulatory and legal environment in which Fastned operates:

- Pending legal procedures may have an impact on the Fastned business case, take up management time, and result in internal management and legal counsel costs.
- Risk of revocation, expiry and unsuccessful retender of operating permits may have an adverse effect on the location portfolio of Fastned which could have an adverse effect on its business, results of operations and prospects.

Risks Relating to the Financial Environment in which Fastned operates:

- Continued or new lock-down measures related to the COVID-19 virus outbreak could have an adverse effect on Fastned's revenues and Fastned's financial position resulting in increased losses, negatively impacting Fastned's financial condition.
- Fastned has recorded losses in recent periods and may not achieve profitability in the future, this could have a material adverse effect on Fastned's financial condition.
- Fastned may not be able to secure additional financing in the future to implement its growth strategy. Not being able to implement its growth strategy could have a material adverse effect on the business, results of operations, financial condition and prospects of Fastned.
- Failure to comply with the interest terms as mentioned in the Final Terms of the bonds issued by Fastned could result in an event of default. Any failure to repay or refinance the outstanding bonds when due could materially and adversely affect the business, results of operations, financial condition and prospects of Fastned.
- Fastned's inability to obtain subsidies for building its fast charging stations and/or receive payments under such subsidies could have a material adverse effect on Fastned's financial condition.
- Fastned has limited flexibility to adjust the operating costs of the business which could have a material adverse effect on Fastned's financial condition and prospects.

3.3 What are the risks that are specific to the securities?

The following is a summary of selected key risks that relate to the Bonds:

- Fastned may not generate sufficient revenues and/or be able to generate subsequent investments (refinancing) to be able to repay the principal amount of the Bond(s) at maturity. In such event, the

principal amount may not be (completely) repaid at maturity. This could result in a delay of repayment or in the worst case, the principal not being (fully) repaid at all.

- Fastned may not generate sufficient revenues and/or be able to generate subsequent investments (refinancing) to be able to (completely) make interest payments as they become due. This could result in a delay of interest payments or in worst case, the interest not being (fully) paid out.
- The Bonds have a limited tradability. The risk to investors is that they may not be able to sell Bonds in their possession at a moment they wish to do so, possibly not at any price. As a result, it is possible that investors have to wait until the moment of redemption to redeem the principal amount related to their investment in the Bonds.
